

eLoader™ 4.0 New Release

The most versatile tool for loading any external data into Oracle® Clinical and TMS

What can you look forward to in the new release?

Major Enhancements

- Load into Test / Map to provisional objects
- View any prepared records before loading into OC
- Perform DCI Header changes through eLoader (for DCI Date and Time)
- Improved processing of Compare and Split, using full functionality (Insert/Update/Delete), and added two additional validation checks
- Improved OC Delete (several functional enhancements, enhanced performance)
- Limit Scope of Scan to selected study
- Management of Dataset Tables
- The validation check for checking with DVG values now also checks data in Thesaurus DVGs
- Allow schedules for Dataset Autoload to be independent from File Autoload jobs
- Option to perform administrative tasks during off-hours only

Minor Enhancements

- Improved navigation between files and runs
- Improved option to stop a Schedule
- Added Refresh button on several forms
- Understands the OC concept of user groups for checking access to studies
- Renamed specific buttons from Back to Exit
- Access to DCI Header changes controlled on the user level by the administrator
