

PPD MedDRA® Dictionary Browser

Designed by medical coding experts to meet their real-life needs

To maximize the efficiency and accuracy of an organization's medical coding operation, it is essential to provide a MedDRA dictionary browser that is flexible, intuitive to use and delivers the features that the expert medical coder requires at their fingertips.

The PPD MedDRA Dictionary Browser provides the features that an expert medical coder expects

For almost twenty years, CSS Informatics has been helping pharmaceutical and biotechnology companies of all sizes to meet the challenges of data migration, medical coding, system implementation, customization, validation, testing, support, technical resourcing and process management. We are a leading supplier of consulting services in support of the Oracle® Life Sciences suite as well as Phase Forward's Clintrial™ application.

This is how we can help

The **PPD MedDRA Dictionary Browser**:

- ✓ Improves access to MedDRA™ coding dictionary via your intranet
- ✓ Works over your data structures
- ✓ Supports rapid dissemination of MedDRA coding updates
- ✓ Supports access to multiple versions of MedDRA
- ✓ Is intuitive to learn and use

Feature of the PPD MedDRA Dictionary Browser

Browse MedDRA across the intranet

- ▶ Built using HTML to enable presentation of the MedDRA dictionary through a standard web browser, deployment across your intranet is straightforward.
- ▶ Navigation around the Browser view of MedDRA is intuitive using a familiar tree format similar to Microsoft Windows Explorer.
- ▶ The Browser can be customized to fit your data structures.
- ▶ The PPD Medical Dictionary Browser references the current dictionary version, including any of your own synonyms with no need to install a separate copy of the MedDRA thesaurus just for browsing.
- ▶ Every change in the thesaurus, such as an upgrade or the addition of a new synonym is available in the Browser immediately.

Powerful Search Capabilities

- ▶ Code search capabilities enable you to rapidly find terms in all levels of the dictionary, including the synonyms. Searching is further enhanced by allowing searching by code or logical combination of search terms (and/or). The Browser supports searching on the special search category of MedDRA.
- ▶ When selecting a term, you can display the primary and secondary path(s) to the primary and secondary SOC(s).
- ▶ For each term in a hierarchy you can display the details of the term and use the details to copy and paste into other applications. The details you want to show are also customizable.
- ▶ Link out to external web search engines (customizable to your choices) to search for term lookups.
- ▶ The Browser can be called from external application or your intranet to search on a term when referenced.

Software and Services

The technology and expertise to implement PPD Medical Dictionary browser is available as a combination of software and consulting services, enabling your company to browse MedDRA with ease across your intranet.

PPD MedDRA Dictionary Browser will give your medical coders the tool that they need to maximize the efficiency of their browsing.
