

Argus Safety™ Services from CSS Informatics

CSS Informatics is the most established drug safety software consulting practice in the industry with seventeen years of continuous innovation and support. Since 1990, more than 150 pharmaceutical and biotech companies on five continents have found successful solutions through our consulting services.

Our success is built on a team of well-educated, industry-proven experts that have an average of ten years of pharmaceutical technology experience. And, as a division of the billion-dollar CRO PPD, Inc., we have stability and staying power.

The CSS Informatics Suite of Argus Safety Services

CSS Informatics has practical consulting experience with every major commercial drug safety application on the market today. Our real-life experience with Argus Safety spans almost a decade and includes the following key aspects of a project lifecycle.

Argus Safety Data Migration

Since 1995, CSS Informatics has migrated more than 150 clinical and drug safety data environments. Our proven, proprietary tool, [TableTrans®](#), helps accelerate the mapping and source code generation process. We've successfully executed multiple data migrations involving Argus Safety across several major version releases. We know the Argus database and we can help.

Argus Safety Validation

It's not enough to install Argus Safety and know how to use it. Regulations require this application to be validated and CSS Informatics has been validating drug safety systems for almost fifteen years. We provided key validation expertise during the rollout of the first web-based Argus system years ago and we offer that same commitment to detail and quality today.

Enhancements for Argus Safety

[TableTrans®](#) - Our industry-proven software facilitates the graphical design of data transformation code. Native PL/SQL objects specifically built for the pharmaceutical industry speed the design of data warehouse connections, data migration mapping, and verbatim-to-dictionary hit ratio improvements.

[E2B ICSR Browser](#) – Our complete, E2B electronic reporting package interfaces with Argus Safety to provide real-time transmission and monitoring. With a proven gateway interface that is fractions of the cost of Cyclone (Axway) you can rest easy with this best-of-breed solution.

Summary

With CSS Informatics, you're not just getting our Argus Safety expertise. You're benefiting from seventeen years of experience with every major drug safety system in the world! There are different ways of solving the same problem and consulting firms without our range of experience offer limited perspectives. There are better ways to do things and CSS Informatics is leading the way.
