

## Data Migration - Clinical Trial and Drug Safety Applications

### Company Background

CSS Informatics is an established pharmaceutical software consulting practice with more than 17 years of extensive implementation, customization and validation experience. Our industry-proven consultants have an average of 10 years of pharmaceutical technology experience and provide senior expertise with every major clinical trial and drug safety application – Oracle® Clinical/TMS/RDC, Oracle AERS, ARISg™, Argus Safety™, Clintrial™ and Clintrace™.

Over the past 11 years, **CSS Informatics has successfully migrated more than 160 clinical trial and drug safety environments.** Using our proprietary, time-tested software, **TableTrans®** and **eLoader™**, we can accelerate the mapping and development process, automatically generate validation documentation and provide the capability to do complex projects previously considered impractical.

### A Sample of our Data Migration Successes

In our extensive experience, tens of millions of records have been painstakingly mapped, tested and then used in production environments. Large and small companies alike have depended on CSS Informatics to ensure the integrity of their data. Our projects include:

- ARISg to Clintrace
- Clintrial to Oracle Clinical
- ES1-SafetyManager® to Clintrace
- Clintrace to Argus Safety
- ARISg to Argus Safety
- Clintrace to ARISg
- COSTART and ICD9 to MedDRA
- Custom, home-grown systems based on Oracle, Paradox and Access
- ARISg to Oracle AERS
- Argus Safety to Clintrace
- Oracle Clinical to Oracle Clinical

**Micro Study #1:** In 2003, a major New Jersey pharmaceutical company successfully migrated five Clintrial studies to Oracle Clinical using our eLoader technology, saving significant time and cost. We have proven that active, complex studies can be reliably moved between different clinical data management systems.

**Micro Study #2:** In 2006, we helped a billion-dollar Pennsylvania biotech company quickly migrate drug safety cases for a recently acquired product so that the PSUR could be completed on time. We were able to utilize mapping plans generated by our TableTrans software from a prior migration, saving the client 35% of the cost and eight weeks of the time of a typical safety data migration.

### Choose CSS Informatics for Your Data Migration

CSS Informatics has performed a greater number and variety of successful data migrations at a higher level of quality than any independent pharmaceutical consulting firm. We have the answers to tough migration challenges. At CSS Informatics, our Experience + Innovation drives the success of every project.
